

ABSTRACT OF THE DISCLOSURE

A moisturizing hairdressing apparatus including an main unit, a handpiece, an injection chamber, and an injecting tube. The main unit generates steam to moisturize one's hair. The handpiece movably attached to said main unit. The injection chamber is accommodated in said handpiece and receives the steam supplied through a pipe connected to the bottom part thereof from the main-unit. The injecting tube injects the steam to one's hair through a nozzle provided at one end thereof. In this apparatus, an outlet of said pipe is positioned between the nozzle and an inlet opposite to said nozzle of said injecting tube.
